

CASE STUDY

CenterPoint Energy

At Kardie Equipment, our main goal is to provide customers with the safest, most efficient services and access while also delivering the highest quality workmanship available. All our Bronto Skylifts improve operational performance and efficiency at challenging heights and environments.

Problem

When we first began working with CenterPoint Energy, processes and efficiency were not as high as they could be since their equipment could not keep up with their need to complete tasks. They were using three crew members at a time to complete 17 blade repairs. They knew something needed to be done so they reached out to us.

Solution

We rented out a Kardie Equipment Bronto Skylift to CenterPoint Energy to assist them in their blade repairs. The Bronto truck not only improved operational performance and efficiency, but with advanced controls and one-button automatic leveling of the outriggers, the truck could be set up and elevated up to the area needing work in a matter of minutes.

Result

The Bronto Skylift had enabled CenterPoint Energy's turbine maintenance division to run a direct comparison against their traditional platform crews over a four-month period. After utilizing the Bronto truck, they have been able to complete 45 blade repairs with, now, just one crew. The Bronto Skylift truck has changed their business so much they have purchased one of their own!

Client **Testimonial**

"Our transmission crews love it. We use the Bronto daily."
